

PROHIBITED VAPORIZER USER MANUAL
one nation under the influence

INITIATING YOUR DEVICE

1. Remove 5th Degree components from the packaging.

2. Charge 5th Degree using the included USB Charger.

3. Slide the cartridge out of the recessed chamber, then turn the mouthpiece approximately 45 degrees to pull it off.

4. Remove the cartridge cap, then align the cartridge with the chamber. (See the individual Dry Herb / Concentrates sections to fill the cartridge.)

5. After filling the cartridge, replace the mouthpiece, and drop the cartridge into the cartridge chamber. *be sure to align the cartridge identifier into the notch on the back side of the cartridge chamber.

6. Unlock your device for use by pressing the heat button three times within two seconds. The perimeter light will flash white when unlocked and red when locked. This feature is used to prevent accidental heating.

7. Press the heat button to activate the device. (See the individual Dry Herb/Concentrates sections for heating details.)

GET STARTED

5th Degree arrives with a partial charge, so make sure you completely charge it before its initiation. Plug the included charger into a USB port and connect the magnetic head on the charger to the metal port on the end of the device. The light ring around the heat button and the perimeter light will flash, indicating that 5th Degree has started charging. During charging the perimeter light will pulse red; turning turn solid green when 5th Degree is fully charged. 5th Degree will need to be recharged when the light ring and perimeter light begin to double blink in red.

5TH DEGREE COMPATIBLE CARTRIDGES

Your PROHIBITED 5th Degree device comes with two vaporizer cartridges; one for dry herb and one for concentrates. 5th Degree will automatically recognize each type of cartridge and perform accordingly. You can also tailor your experience with variable voltage and temperature settings.

DRY HERB CARTRIDGE

FILLING: Fill the cartridge with ground dry herb. Don't fill the cartridge more than to the bottom of the black ring inside. Pack it loosely enough to allow room for air to flow. This allows the heated air inside the cartridge to make uniform contact with the dry herb, producing maximum vapor. Clean and empty the cartridge between uses using the included brush and picks. A cotton swab with a minimal amount of rubbing alcohol can be used to clean any residue in the cartridge or mouthpiece.

HEATING: Make sure 5th Degree is unlocked. Press and hold the heat button for 3 seconds to activate heating. Once activated you can let go of the button. The perimeter light will glow red as it heats up. When it turns green 5th degree has reached temperature. While at temperature, inhale vapor slowly and deeply. To deactivate heating press and hold the heat button for another 3 seconds, or keep vaping until the automatic cutoff after 2 minutes. The perimeter light will start to flash 5 seconds before automatic cutoff.

CONCENTRATES CARTRIDGE

FILLING: The Dual Quartz/Titanium heater can vaporize a wide variety of concentrates from hard solids to thick fluids. Fill the cartridge with your choice of concentrate up to the top of the white rim. Clean the cartridge between uses with the included pick. A cotton swab with a minimal amount of rubbing alcohol can be used to clean any residue in the cartridge or mouthpiece.

HEATING: Make sure 5th Degree is unlocked. Press and hold the heat button to activate heating. After a few seconds it will reach temperature. Keeping the button pressed, begin to inhale vapor slowly and deeply. Let go of the button to deactivate heating. If the heat button is pressed and held for a continuous 30 seconds 5th Degree will automatically cutoff heating.

SETTING THE TEMPERATURE/VOLTAGE

5th Degree will automatically recognize which type of cartridge has been inserted and switch between temperature and voltage settings accordingly.

5th Degree has 3 different temperature settings for your dry herb cartridge,
LOW: 200°C / 390°F
MED: 210°C / 415°F
HIGH: 225°C / 440°F

and 3 different voltage settings for your concentrates cartridge,
LOW: 3.7 V
MED: 4.2 V
HIGH: 4.7 V

To change the temperature or voltage, make sure the 5th Degree is unlocked. Quickly press the heat button twice. The three settings lights (below the heat button) will begin to cycle. 1 light indicates LOW setting, 2 lights indicate MED setting, and 3 lights indicate HIGH setting. To make your selection, simply press the heat button once when the lights correspond with your desired setting.

LIFETIME WARRANTY
